

X-Server

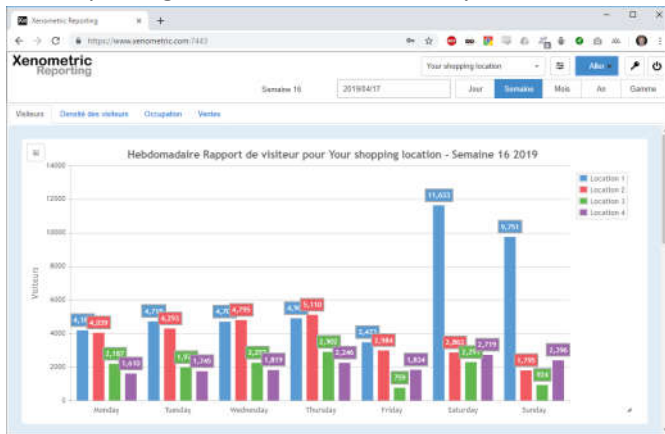

Collects data from Irisys, Brickstream, Optex, Xovis and WebRelay counting devices.

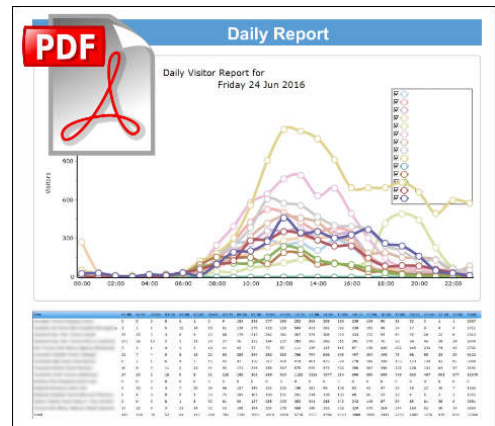

Multithreaded architecture allows multiple counters to be harvested simultaneously. Thousands of people-counters can be simultaneously connected to the X-Server.

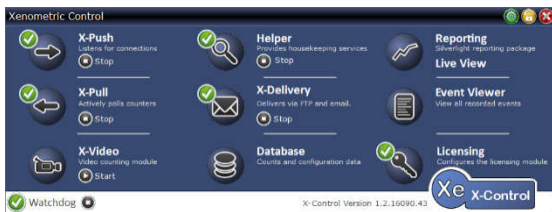

Web reporting from the cloud or from your server.

Emailed PDF reports

Many outputs are configurable; CSV and XML files, database connectivity and relay pulses via an IP addressable IO module.

A comprehensive control application is included for configuration and logging.

All core functionality runs as Windows Services.

Compatible with all 32-bit and 64-bit versions of server and desktop Windows from Windows 2003 onwards.

SQL Server Express is used to store all the data collected. Scheduled backups and access to the data are available.

This software has been under continuous development since 2009.

30 day free trial on all new installations.
