

X-Server

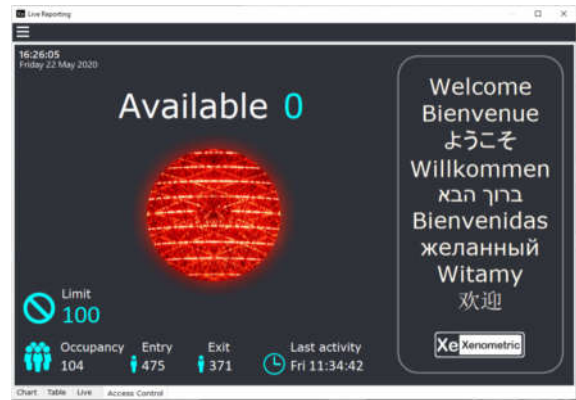

Collects data from Optex Akribos cameras using FTP or HTTP and real-time data via MQTT. X-Server can collect data from an unlimited number of Akribos cameras and can be installed on your private network or our cloud server can be employed.

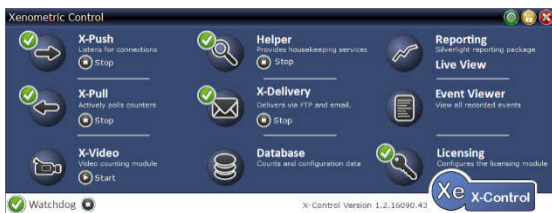

Web reporting from the cloud or from your server.

Access Control screens at your entrances.

Many outputs are configurable; CSV and XML files, database connectivity and digital IO via an IP addressable IO module.

A comprehensive control application is included for configuration and logging.

All core functionality runs as Windows Services.

Compatible with all 32-bit and 64-bit versions of server and desktop Windows from Windows 2003 onwards.

SQL Server Express is used to store all the data collected. Scheduled backups and access to the data are available.
